## DESCRIPTION:

### **3M™ PPS™ PAINT CUP SYSTEM:**

This is the ideal way for busy contractors to save time and money. The system consists of a stainless steel fitting which adapts the container to your gun, a hard outer shell, and the disposable inner liner. Each liner includes a lid with built in filter, no straining required with most products. Simply insert a liner in the outer shell, fill it, cap it, and install on the gun. The flexible inner liner squeezes in as paint is used, meaning no air pockets and no fluttering. Spray sideways, upwards or even upside down, material feed is consistent and drip-free. Please contact your nearest distributor or Lemmer office for more information.
