

TIP EXTENSION / CAVITY SEALING ATTACHMENT

Tip extension features:

- Made of lightweight alloy
- Adjustable angle head
- Maximum 3,500 psi.

Connector fitting can be used to join 2 extensions or use as a straight tip thread in place of the swivel elbow (6-10).

Tip thread adapter on this end for Lemmer equipment. For Graco equipment move this adapter to the other end.

CAUTION: Do Not bend.
 Item 3 is factory replacement only

WARNING - High pressure spray can be dangerous!

- Read spray pump operating manual and safety instructions.
- Maximum operating pressure of this extension is 3500 psi.
- Do not use this metal pole near any electrical or high tension wire, electrical shock could cause serious injury or death.
- Never put your hand, fingers or body over the spray tip or a leak. Injection could occur. In case of penetration, seek medical aid immediately, do not treat as a simple cut! Be prepared to tell the doctor what fluid was injected.
- Do not bend pole. Discontinue use if pole leaks or is bent, or becomes corroded. These conditions could cause dangerous leaks.
- Final clean-up, displace moisture with mineral spirits to avoid corrosion.

Note about shut-off spitting:
 The longer the extension is, the more potential of spitting. The L50 gun shuts off the quickest and therefore has the least spit with an extension.
